

11/14/81

Russell;

An expression of thanks for keeping in touch and informed of your activities.

This year has given me new encouragement. For several years the old body was breaking down forcing early retirement. Now I am on the mend and improving very rapidly. Open heart surgery in January 81, replacing the aortic heart valve with a prosthetic implant is working great as is the by-pass work. A Radiation Cobalt program is controlling and we hope curing cancer, which done a little damage before discovered.

My wife and I plan a few trips in our motor-home so things are looking up.

Russell - accept the check ^{for} support of the program, for research etc. as you see the need. Send me one copy of group History

Sincerely
Milton W. Adam
